

# DEX Whale-Alert Bot

An automated system that watches large on-chain wallet activity across decentralized exchanges and fires directional alerts. This report backtests the **quality of those alerts** — not live trading P&L — over every signal resolved to date.

RESOLVED SIGNALS

1,199

across 4 chains, 6 signal types

STRONGEST SEGMENT

+2.09 R

Solana signals · best risk-reward

AGGREGATE BEST CASE

+0.05 R

2% / 15% across all chains

HEADLINE FINDING

The edge is concentrated **off-BSC**. Solana, Ethereum and Base signals are clearly profitable, while BSC — which produces **92% of all signals** — sits at breakeven and dilutes the blended result. Rebalancing signal flow toward the smaller chains is the primary lever.

Performance by network

expectancy at each chain's best risk-reward

| NETWORK                                                                                             | SIGNALS | BEST RISK-REWARD   | WIN RATE | EXPECTANCY |
|-----------------------------------------------------------------------------------------------------|---------|--------------------|----------|------------|
|  Solana          | 52      | 2% / 15% (1 : 7.5) | 36.4%    | +2.09 R    |
|  Base            | 16      | 3% / 5% (1 : 1.7)  | 71.4%    | +0.90 R    |
|  Ethereum        | 27      | 2% / 15% (1 : 7.5) | 18.5%    | +0.57 R    |
|  BSC 92% of flow | 1,104   | 2% / 10% (1 : 5)   | 16.0%    | -0.04 R    |

By entry timeframe

| BOARD            | SIGNALS | WIN RATE                     |
|------------------|---------|------------------------------|
| 24-hour movers   | 10      | <div><div></div></div> 30.0% |
| 30-minute movers | 951     | <div><div></div></div> 27.1% |
| 5-minute movers  | 225     | <div><div></div></div> 22.9% |

By signal type

| TYPE            | SIGNALS | WIN RATE                     |
|-----------------|---------|------------------------------|
| Step-up · buy   | 53      | <div><div></div></div> 35.8% |
| Activity · buy  | 343     | <div><div></div></div> 28.9% |
| Activity · sell | 343     | <div><div></div></div> 25.9% |
| Jump · buy      | 197     | <div><div></div></div> 24.0% |
| Jump · sell     | 219     | <div><div></div></div> 22.9% |
| Step-up · sell  | 44      | <div><div></div></div> 18.6% |

Risk-reward grid — aggregate

every signal replayed against each stop / take pair

| STOP / TAKE | RATIO   | WIN RATE | EXPECTANCY |
|-------------|---------|----------|------------|
| 2% / 15%    | 1 : 7.5 | 12.3%    | +0.05 R    |
| 2% / 10%    | 1 : 5   | 17.0%    | +0.02 R    |
| 2% / 7%     | 1 : 3.5 | 21.9%    | -0.01 R    |
| 3% / 10%    | 1 : 3.3 | 21.3%    | -0.08 R    |
| 5% / 5%     | 1 : 1   | 41.2%    | -0.18 R    |

**Reading the smaller samples.** Solana (52), Ethereum (27) and Base (16) are early samples and each chain's "best risk-reward" is chosen in-sample, so treat the exact figures as directional rather than final. The direction is consistent across all three non-BSC chains, and Solana's sample is now large enough to be meaningful on its own.

**Expectancy (R)** — average profit or loss per signal in units of risk; 1 R equals the stop-loss distance. Positive is profitable.

**Best risk-reward** — the stop / take pair with the highest expectancy for that segment.

**Win rate** — share of resolved signals that reached take-profit before stop-loss.

**Method** — each alert's post-signal price path is recorded, then replayed against a 42-cell grid of stop-loss and take-profit levels.

Sample: 1,199 resolved signals    Universe: Binance-Futures-listed tokens on Ethereum, Base, BSC, Solana
